Professional Profile

Infrastructure-focused DevOps Engineer with hands-on experience operating and automating production systems across cloud and hybrid environments, backed by a 3-year background in IoT and industrial systems engineering. Experienced in Kubernetes, Linux administration, infrastructure automation, observability, and troubleshooting distributed systems.

With a mechatronics and Industrial IoT background, I understand systems end-to-end, from hardware and sensor infrastructure to cloud platforms and production operations.

Professional Experience

Platform Engineer

Sep 2025 - Present

Locon Sp. z o.o.

Warsaw

- Designed and implemented a GCP-based lifecycle tracking platform supporting 50,000+ devices across logistics and service operations.
- Built infrastructure automation and data aggregation workflows integrating 6+ systems using Terraform, Cloud Functions, and CI/CD pipelines.
- Built internal AI-assisted automation workflows for operational and financial systems.
- Created repository indexing and cross-service debugging workflows to improve troubleshooting across distributed systems.
- Implemented a customer scoring system in BigQuery to predict purchases without incentives such as SMS, email, or push notifications.
- Developed AI-assisted operational tooling integrated with PagerDuty to support automated production incident analysis.
- Maintained Cloudflare services: DNS, domains, Zero Trust (RBAC), and Cloudflare Workers.

DevOps Engineer

Apr 2025 - Sep 2025

Locon Sp. z o.o.

Warsaw

- Administered Kubernetes clusters on GCP, including application containerization and configuration through Helm values.
- Replaced manual deployments with a full CI/CD process using GitHub Actions, ArgoCD, Jenkins, and Terraform, automating and documenting previously undocumented workflows.
- Configured GCP projects, including IAM, VPC, VMs, Cloud SQL, Secrets, Buckets, Artifact Registry, Service Accounts, and Workload Identity Federation.
- Configured and maintained secure network connectivity between distributed GCP environments using VPC Peering, reverse proxies, and load balancing.
- Maintained secure network infrastructure including Fortigate firewalls, VPN connectivity (Tailscale), and Cloudflare Zero Trust access controls.

- Migrated and stabilized production infrastructure from on-premise Proxmox environments to GKE, reducing operational overhead and improving deployment reliability.
- Restored and stabilized pre-production infrastructure after two years of inactivity, enabling continued testing and deployment workflows.
- Implemented observability and monitoring solutions using Prometheus and Grafana to support production system reliability and incident response.

Product Application Engineer

Apr 2023 - Sep 2025

IoT Solution

Warsaw

- Integrated physical machine sensor systems with the IT layer, working with industrial communication protocols in Industrial IoT environments.
- Configured data processing pipelines for sensor data and managed data in MariaDB.
- Configured monitoring dashboards and alerting workflows for end-to-end operational visibility across industrial IoT systems.
- Acted as a bridge between Operational Technology (OT) and IT teams.

Operations Manager Assistant

Aug 2022 - Apr 2023

IoT Solution

Warsaw

Education

M.Sc. Eng. - Mechatronics of Vehicles and Construction Machinery

2024 - 2026

Warsaw University of Technology

Warsaw

Thesis: Application of recurrent neural networks for motion prediction of dynamic systems using the harmonic oscillator model as an example

B.Sc. Eng. - Mechatronics, Robotics and Automation

2020 - 2023

Warsaw University of Technology

Warsaw

Thesis: Development of a LoRa communication module enabling sensor connectivity for Internet of Things (IoT) applications

Core Competencies

Linux & Infrastructure: Linux administration, troubleshooting, Kubernetes, Docker, Helm, distributed systems, production infrastructure

Cloud & Platform Engineering: GCP, Terraform, infrastructure automation

CI/CD & Automation: GitHub Actions, ArgoCD, Jenkins, GitOps workflows, operational automation

Monitoring & Observability: Prometheus, Grafana, PagerDuty, alerting, incident response, production monitoring

Networking & Security: VPC, VPC Peering, Nginx, Cloudflare Zero Trust, VPN (Tailscale), Fortigate, load balancing

Programming & Scripting: Python, Bash, SQL, TypeScript, JavaScript

Databases & Messaging: PostgreSQL, MSSQL, MariaDB, Firestore, RabbitMQ, Pub/Sub

Industrial & IoT Systems: Industrial IoT, OT/IT integration, sensor infrastructure, telemetry systems

Languages

Polish - Native | English - C1
